

Increase Performance with "Catapult ®"- the Simple, Fast, and Easy Automated EMV Upgraded Solution

After successful field testing, with an impressive zero-failure EMV transaction tender rate, ECRS is continuing to roll out the Catapult/Worldpay/Equinox patch to sites nation-wide. The patch specifically targets all retailers using the Equinox ® L5200/L5300 PIN Pad devices, and Worldpay ® direct payment processing, to accept EMV transactions ("chip cards") at the point-of-sale and grocery self checkout.

Delivering High Speed EMV Tendering

The ECRS Design and Development experts have delivered a carefully engineered Catapult EMV tendering function that minimizes transaction times through a more streamlined user flow and hyper-fast, reliable code. This combined approach has resulted in EMV transaction times of just under four additional seconds, compared to the traditional credit swipe transaction.

Making the Upgrade Process Seamless and Fully Automated

The ECRS Development team has delivered to market a simple software patch that will allow Catapult retailers to quickly upgrade, by terminal or by store level, without performing a more complex full-version software upgrade. The patch is deployable via ECRS STREAM ®, embedded within the Catapult platform. The retailer simply sets the software update to execute at a specified after-hours time, and the next morning, all selected POS and payment terminals are ready for EMV transactions - no-hassle, no service interruptions. The software upgrade automatically inserts the needed EMV PIN pad forms and executes PIN Pad Operating System

(OS) updates for optimal performance levels. Should the retailer require additional assistance, the ECRS EMV success specialist team stands ready to remotely assist customers throughout the process.

ECRS was the first point-of-sale provider to be direct, L-3 EMV certified with Worldpay, and the first off the shelf POS solution to be L-3 EMV certified with the Equinox L5300 and L5200. Read more [here](#).

Additional Information for Existing ECRS Customers:

ECRS is delivering the EMV patch at no additional charge. Customers who wish to take advantage of this patch update must have:

- A contract with the Worldpay National Sales team (via the ECRS Direct Tunnel)
- Equinox L5200 or L5300 device
- Catapult v. 5.3.2
- A current Support and Care Package with ECRS

More information about our current EMV-status with all preferred processors is located on myECRS or call 800.211.1172 option 1.
